Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	yes
2	README / Setup Guide (instructions to run the project)	yes
3	requirements.txt / package.json / dependency file	yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example or similar)	yes
6	Deployed application URL (if hosted)	yes

7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Dockerfile / Containerization config (if applicable)	N/A
9	Test files and test results	yes
10	Demo video or walkthrough (if required)	yes

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	N/A
Login Credentials (Demo)	N/A
Platform / Hosting Provider	N/A
Repository Link	N/A
Demo Video Link	N/A

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:
Pre-requisites:
 [List required software, versions, and system requirements]
 Python and pip, FastAPI, Uvicorn, Jinja2, SQLAlchemy, SQLite, google-generativeai,
 environment variable for GOOGLE_API_KEY.

Step 1: [e.g., Clone the repository: `git clone <url>`]
 Create a virtual environment by running `python3 -m venv venv`

Step 2: [e.g., Install dependencies: `pip install -r requirements.txt`] **Step**
 2. Activate it: `venv\Scripts\activate` (Windows) / `source venv/bin/activate`

3: [e.g., Configure environment: copy `.env.example` to `.env`] **Step 4:**
 3. Install dependencies: `pip install -r requirements.txt`

[e.g., Run database migrations: `python manage.py migrate`] **Step 5:**
 [e.g., Start the application: `python manage.py runserver`] **Step 6:**
 4. Configure `GOOGLE_API_KEY` in the environment or `.env` file.

[e.g., Open browser at `http://localhost:8000`]
 5. Start the server: `uvicorn app.main:app --reload`

6. Open `http://127.0.0.1:8000`; API docs: `http://127.0.0.1:8000/docs`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No hosted URL is documented; deployment is described for local use.	Use the local URL shown in Step 4.
2	Demo login credentials are not specified.	No demo credentials are documented.
3	No repository, Dockerfile, test files, or demo video are specified in the project document.	These items are not documented in the provided source.
