Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • • I want a workout plan that matches my fitness goal. • Can I change the plan with feedback, such as more cardio or more rest days? • I need a useful nutrition or recovery tip.	THINKS • • My plan should consider my age, weight, goal and workout intensity. • I want a clear day-by-day • 7-day workout plan. • The plan should change when my needs or preferences change.
PERSONA FITNESS USERNAME R <i>(Individual User(Role / User) Type)</i>	
DOES • • I enter my personal details, goal and preferred workout intensity. • I follow the personalized • day-wise workout plan. • I submit feedback to update and refine the plan.	FEELS • • Motivated by a structured plan • for my selected fitness goal. • More confident with a clear, personalized workout routine. • Supported because feedback can refine the plan as needs change.
